Railway 200 Malaysia: Inspiring the Future of Rail in Malaysia

SEMINAR'S THEME

Railways have been central to shaping cities, connecting communities, and driving economic growth for the past two centuries. Today, as we celebrate Railway 200, we stand at a turning point: how do we ensure rail continues to inspire the future of mobility in the face of rapid urbanisation, climate change, digital transformation, and growing passenger expectations?

Delivering world-class rail is no longer just about laying tracks and running trains — it is about integration across modes, ensuring operational excellence, adopting cutting-edge technologies, and building systems that are safe, sustainable, and people-centred. Engineers are at the heart of this challenge, with a responsibility to not only design and deliver but also to operate, maintain, and continually improve the rail networks that keep cities moving.
